SEA-EU Master Research Internships

Are you a master student looking for a topic for your Master’s thesis? Or maybe you would like to gain work experience in a laboratory or research facility? Then let’s talk about opportunities available via the **SEA-EU Master Research Internships**.

Tell me more!

A member of the [SEA-EU Alliance](#) since 2019, Kiel University collaborates with 8 other partners across Europe on many aspects of university life. Together we aim to encourage mobility of our students and researchers and facilitate collaborations across the network. We believe, by providing an attractive research environment and network for the next generation of researchers, we are investing in the sustainable development of our University, the SEA-EU Alliance, and Europe as a whole.

Internships for Master students represent a key learning moment between your undergraduate studies and professional life. They help to obtain (international) work experience and add practical skills to your knowledge which you have previously acquired through your studies. They help you to orientate yourself professionally and widen your perspectives.

What else should I know?

- Master internships should last a minimum of 60 days and up to six months. There is no fixed starting point for your internship, but some supervisors specify a time period in which they offer an internship.
- The internships are open to students from **all** disciplines. Have a look [here](#) to see if there is something in your field.
- Your internship can be financed through Erasmus+ mobility funds of Kiel University. You have to apply for it before you start the internship. You can find more information about Erasmus+ [here](#).

Interested?!?

For more information about the **SEA-EU Master Research Internships** and a complete list of offers, click [here](#). Together with motivated researchers we have already identified more than 100 hundred offers in a range of disciplines. Maybe there is something suitable for you!
